

Bird Nest Math

Look at each bird nest. Count the number of eggs in the nest. Then draw a line to the same number of birds that hatch from the eggs in each nest. On the cracked egg shell next to the baby birds, write the numeral that shows how many baby birds will hatch from each nest of eggs. The first one has been started for you. When finished, color the nest, eggs, and baby birds with care and patience, just like the mother bird would!
